Precision PLUS ULTRA

OPTIMISE FRUIT PRODUCTION THROUGH INNOVATION

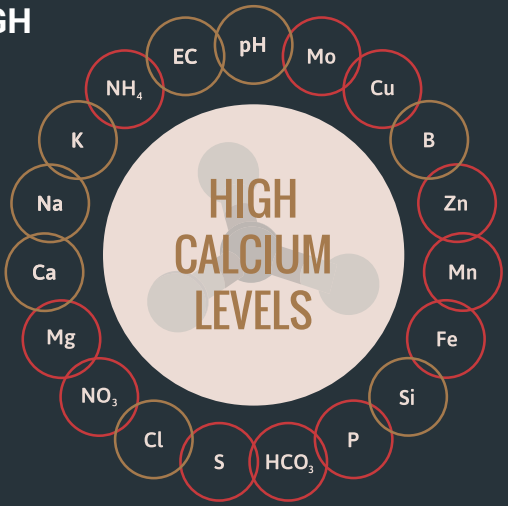

INNOVATION IS IN OUR ROOTS

1) PRECISE BUFFERING AND HIGH CALCIUM LEVELS

Crucial for growth of new plant tissue

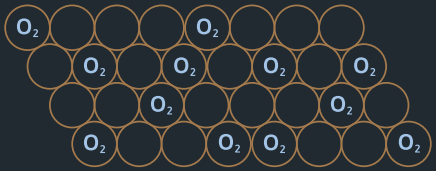

2) SUPERIOR STRUCTURE

Maximising the opportunities for re-use

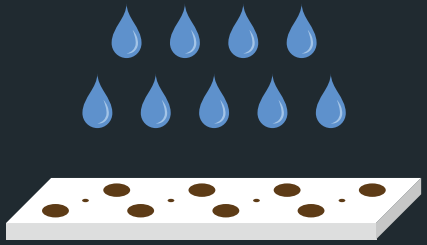

3) OPTIMUM AIR FILLED POROSITY

Giving plant roots the right levels of oxygen for superior rooting

4) RAPID HYDRATION

Quick and total wetting

5) EXCELLENT DRAINAGE AND EASE OF STEERING

Can be rapidly wetted up and dried down

WHAT THE GROWER THINKS...

Sandy Booth, MD of The New Forest Fruit Co. Ltd, in Hampshire, produces 3,000 tonnes of strawberries annually. He now grows 100% of his strawberry crop in Precision Plus Ultra growbags.

Initially, Sandy trialled one hectare of the growbags on the crops in the field, glasshouses and in polytunnels. He was so pleased with the results of the substrate's performance that he decided to convert the whole operation over to the new growbags.

"The new Precision Plus Ultra growbags generate a higher fruit quality and we have seen yields increase," says Sandy.

"They have better drainage, higher air filled porosity due to 'Ultra' particles in the substrate and they are consistent, which encourages uniform rooting and healthier plants."

HIGHER QUALITY & INCREASED YIELDS
